High Level Requirement Document for

Meal Delivery System

⊢ **Features List** ⊣

⊢ Introduction ⊣

The project aims to develop a meal-kit delivery system for home cooked nutritious food lovers. All customers will be delivered meal(s)/kit(s) which will have all the ingredients required for cooking along with the recipe. It is designed to innovate and enhance the features which are not available in the present competitor's website.

The ready meals business model is multi vendor where as the meal kit delivery system is single vendor and is managed and delivered by the admin.

⊢ **User Type** ⊢

- **Front-end Users:** Front-end users will be able to view complete details of the products offered on the website and will be able to navigate on other pages of the website which does not require registration/log-in on websitePages.

- **Buyer/Customer:** Buyers will be able to purchase products & gift cards through the website after completing registration on the website.

- **Chef:** Chefs users can be any user who has a passion for cooking and want to list their products (ready meals) for selling. Chef is a terminology used for the user type and these users need not necessarily be trained professionals.

- **Web Admin:** Website Administrator will have complete control of the system. All of the products on the website will be uploaded and managed by admin. Admin will also manage the deliveries.

Features Covered in Scope of Work

Following are the features for different users, which are there in system:

Front-end User Features

- Home page

  - **Login**

  - **Sign Up**

  - **Location Selection**

Third Party APIs

- Payment Gateway API will be bought and provided by the client

- The project quote includes an integration of a single payment gateway i.e. PayPal. If any other payment gateway is required to be integrated - that will cost USD 750 extra and API will be procured & provided by the client

- For third Party APIs, we will require API documentation

⊢ Exclusions ⊢

- Newsletter subscriber's list management - Admin will be able to download the CSV file OR we can integrate Mail Chimp for subscriber's list management. (As per client's requirement)

- Project scope does not include following features as these features will be used from the 3rd Party Application login interface i.e. Mail chimp account:

Scheduling/Sending out mailers	Mailer designing
Reports/Statistics	Un-subscribe

Confirmation Mail/Dripping Messages management and scheduling

Any other mass mailing or feature which is directly available into the 3rd Party Application Interface

Shopping cart Integration/Development is not a part of the scope
